

YAG:Ce scintillator Crystals

Description: YAG:Ce is a long wavelength fast radiation hard scintillator

Scintillation crystal	: Ce doped Yttrium Aluminum Garnet $\text{Y}_3\text{Al}_5\text{O}_{12}$
Transmission range	: 500-1000 nm
Density	: 4.57 g/cm^3
Emission maximum	: 550 nm
Emission band	: 500 – 700 nm
Emission intensity	: Approx.. 30.000 photons / MeV
Average decay time	: 70 ns
Refractive index	: 1.83 (550 nm)
Melting point	: 1970°C
Thermal expansion coefficient	: $8-9 \cdot 10^{-6} \text{ }^\circ\text{C}^{-1}$
Afterglow	: < 0.005 % at 6 ms
